providing a second powder comprising a silicide precursor suitable for forming an intermetallic phase;

blending the first powder and the second powder to form a powder blend;

consolidating and mechanically deforming the powder blend at a first temperature;

and

reacting the powder blend at a second temperature to form the metal phase and the intermetallic phase of the refractory metal-intermetallic composite, wherein the second temperature is higher than the first temperature; and

wherein the first powder comprises at least one of niobium, titanium, and molybdenum; and the second powder comprises at least one of silicon, germanium, and boron[.] wherein the refractory metal-intermetallic composite has a graded composition.

Claim 23 (Currently Amended) A method for forming a refractory metal-intermetallic composite article, the method comprising:
